

Cultural Information – Rex Begonia

(bah-GO-nyah)

Hardy to Zone 10 and higher for outdoors.
Partial sun, grows to 14" in container, minimum temperature 60°.

<u>Light:</u>	Partial sun, an eastern or western exposure. Rex Begonias can tolerate low light but perform better with some direct sunlight.
<u>Temperature:</u>	Maintain temperatures indoors above 60°.
<u>Humidity:</u>	Preferably 50% or higher; however, they will tolerate low levels of humidity for a short time.
<u>Watering:</u>	Bring soil to a state of visual dryness between waterings. When watering, thoroughly saturate the soil until some water runs out of the bottom of the pot. Clay pots will ensure a quick dry down. Do not over water.
<u>Fertilizer:</u>	Moderate feeders when grown under high light. Fertilize with ¼ tsp of fertilizer per gallon of water once a week during the summer or when actively growing. Use a balanced fertilizer like a 15-15-15 or 7-9-5.
<u>Pruning:</u>	Pinch the tips of the young plants to encourage branching. This will help create a bushy plant and discourage leggy growth. On older plants, prune when growth gets excessive.
<u>Insects and Disease:</u>	Little susceptibility to insects, however mildew can be a problem. Treat seasonally with a preventative spray of 1 TBL of baking soda to a quart of water with a dribble of dishwashing soap.
<u>Comments:</u>	Rex Begonias have a resting period in the winter; at this time do not over water them. Give some direct sunlight.
